## **Adobe Acrobat PDF Reader Configuration**

The default configuration of Adobe's Acrobat PDF Reader is not ideal for viewing the PDF log plot pages that are generated by the Polaris software. Follow these instructions on setting up Acrobat to view PDF log plot pages in a symmetrical continuous layout.

Click OK to exit

Open the menu item View then Page Display. UN-check the Show Gaps Between Pages so that the log appears continuous.

NOTE: After configuring Acrobat Reader you will need to exit the program then re-open the PDF file for the changes to take effect.

The image below illustrates how the multiple pages are now displayed as one continuous form. Scrolling through the log pages are now possible without the resizing effect.
